Omasanjuwa Andrew Etsano

Software Engineer · DevOps, Frontend and Full Stack · AI Agent Evaluation

Abuja, Nigeria · etsanoomasan@gmail.com · omasan-etsano.vercel.app · linkedin.com/in/omasan-etsano-317219287

PROFESSIONAL SUMMARY

Software engineer with a BSc in Software Engineering, coding since 2021 and working professionally since 2024 across frontend, full stack and AI evaluation work. Built and launched BookDex, a live multi tenant SaaS product, on my own, and delivered public websites for client organisations. At Georgetown Global Health Nigeria, developed the frontend of a health dataset platform and tested a national agency's ERP system; on contract with Shipd, designs tasks that evaluate AI coding agents. Comfortable with Git, Docker and Linux, and quick to pick up new tools.

EDUCATION

M.S., Data Science and Artificial Intelligence, Campbellsville University 2026 – Near completion

B.Sc., Software Engineering, Babcock University 2021 – 2025

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML, CSS, Rust (task authoring, AI assisted)
- **Frontend:** React 18/19, Next.js 16, TanStack Query and Start, Vite, Tailwind CSS, shadcn/ui, Recharts, Chart.js, Leaflet
- **Backend and data:** Supabase (PostgreSQL, Auth, Row Level Security, Edge Functions), Node.js, REST APIs, Django/DRF, SQLite
- **DevOps and delivery:** Docker, Linux, Bash, PowerShell, CI debugging, Git/GitHub, Vercel deployments, Playwright, test suite design, user acceptance testing; Kubernetes and OpenShift (coursework)
- **Certified:** IBM DevOps and Software Engineering Professional Certificate (Coursera)

PROFESSIONAL SKILLS

Teamwork and collaboration, communication, problem solving, analytical thinking, working independently

EXPERIENCE

AI Coding Agent Evaluation, Task Author (Contract) Shipd, Remote 2026

A company that builds coding challenges to train and evaluate AI coding agents.

- Authored end to end engineering tasks on production Rust codebases: a reference implementation, an 80+ case test suite, an offline containerised test harness and a written specification. Built with Claude Code.
- Calibrated difficulty with data: ran 10 agents per revision and replayed their patches against candidate tests to predict pass rates, keeping tasks inside the required 10 to 50% band.
- Debugged a sealed CI sandbox (offline builds, per run database setup), confirming each fix on real runs.
- Wrote a 30+ case adversarial test suite that attacks passing solutions and exposes specification gaps before review. Revised tasks from reviewer feedback over several asynchronous review stages. One task was approved at human review; a second has gone through the same stages.

DevOps Intern Georgetown Global Health Nigeria, Abuja 2026 – Present

A health organisation delivering public health programmes in Nigeria. Worked with the digital health innovations team.

- Developed the frontend and REST API connections for Knight Data Repository, a health dataset platform, with an interactive map, charts, secure login and archival workflows (JavaScript, Tailwind CSS, Leaflet, Chart.js).
- Ran user acceptance testing on a national primary health care agency's ERP (enterprise management) system: built dashboards tracing 70+ requirements across 13 modules, logged bugs and wrote workflow guides for procurement, HR and finance.
- Supervised field assessors in three states (Edo, Bayelsa, Cross River) during a nationwide health facility assessment, checked submitted data for duplicates and location errors, and wrote the state report.
- Mapped three national drug resistant TB paper forms into the DHIS2 health data system, converted training quizzes into Moodle formats in five languages, and led testing and Google Play publication of Android apps.

Frontend Developer Intern and Content Reviewer Flexisaf Edusoft (education software), Abuja 2024

- Created React interface components in an existing production codebase through Git in an Agile team.

PROJECTS

BookDex Multi tenant SaaS booking and invoicing platform, bookdexhub.com 2025 – Present

- Designed, built and launched solo a booking, client and invoicing platform for African service businesses (React, TypeScript, TanStack Query, Supabase) on Vercel.
- Isolated each business's data with Row Level Security and role based staff permissions, and added staff invites, booking confirmations and PDF invoices.

ZOLIG, Bomas Academy and ShefGuide Next.js 16, TanStack Start, React 19 2026

- Delivered a corporate site (ZOLIG) and redesigned a school's site and staff admin area (Bomas Academy). Developed the React frontend of ShefGuide, a collaborative MSc AI study app.
